

Single Bone Hand

These hand models include individual hand and forearm bones and important anatomical structures (muscles, tendons, retinacula, nerves) in a foam covering to simulate skin and subcutaneous tissue. These models have been developed to allow more realistic teaching activities. For internal and external fixation of hand and wrist fractures, non-unions, osteotomies or arthrodesis. The surgical approach and adequate soft tissue handling – which may be crucial factors for the functional end result, especially in the hand – are important aspects of the practical exercises.

9034.0 Hand sgl bone fx demo

Description	Fractured right single bone Hand, Radius and Ulna. Major structures including nerves, muscles, vessels and tendons attached.
Dimensions	Overall length: 448mm
Material	Solid foam
Fracture	Polytraumatic hand model, see separate fracture chart 9034
Remarks	Delivered with additional cancellous bone block

9031.0 Hand sgl bone fx malun. demo

Description	Entire right single bone Hand, Radius and Ulna with distal Malunion at MCPV. Major
Dimensions	Overall length: 448mm
Material	Solid foam
Fracture	Distal radius fracture. Bennet fracture
Remarks	Delivered with additional cancellous bone block

9034.2 Hand sgl bone fx foam

Description	Fractured right single bone Hand with Radius, Ulna and foam coat. Major structures as nerves, muscles, vessels and tendons attached
Dimensions	Overall length: 448mm
Material	Various material
Fracture	Polytraumatic hand model, see separate fracture chart 9034
Remarks	Delivered with additional cancellous bone block
