SYNBONE®
better education outcome

Skull Holder System

The **Skull Holder System** is especially designed by SYNBONE® for CMF Trauma, Orthognatic and Neuro Surgery Education. This clever and multifunctional system holds all SYNBONE® skulls, partial skulls and maxillas with or without vice attachement. Two adapters, a 3-pin adapter and a hemi-skull adapter, offer a wide range of applications and a 360° stepless rotation of the skulls. The system is delivered in a solid and waterproof transportation case with foam inlays. This reliable **Skull Holder System** guarantees a standardized education concept and convinces in quality and performance.

Features and benefits

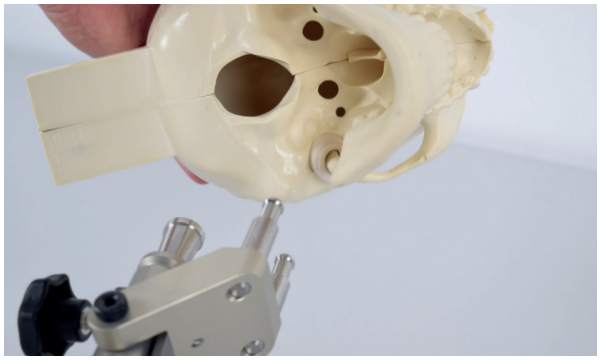
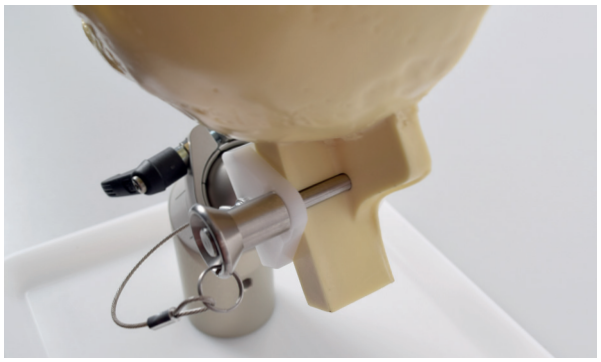
Various table mounting positions

The tray of the **Skull Holder System** has 4 holes positioned in a 90° angle. By mounting the supporting column in the desired angle the holder is accessible from 4 sides. For a firm hold during the exercise it is recommended to clamp the tray to the working table with the two included C-clamps.



3-pin adapter

The 3-pin adapter holds all SYNBONE® skulls, partial skulls and maxillas **with or without vice attachement** securely in place. The three pins are designed to fit in all models and the ball head at the base of the adapter allows a 360° stepless adjustment in all directions.



Hemi-skull adapter

The hemi-skull adapter is designed for all half-shell skulls. A safety bolt holds the half-shell models securely in place. The base of this adapter is a ball head and allows a 360° stepless adjustment in all directions.

To obtain best training results we recommend using our SYNBONE® skull models with our without vise attachment. Ask for SYNBONE's mandibles with Easy Clip mechanism. They offer the highest flexibility combining them with all our Easy Clip skull models and maxillas. Please contact us for our complete product portfolio for your Orthognatic and Neurosurgery trainings.

SYNBONE® is your preferred partner for better education outcome.
